I've been spending quite a bit of time in FlexBuilder lately, and have started to rely extensively on some shortcuts. Some of these are actually Eclipse shortcuts, but regardless, these are some of my favorite:

- Ctrl-F11: Run
- F11: Debug
- Ctrl-Alt-Down: Repeat current line
- Alt-Up: Move line (or selection) up
- Alt-Down: Move line (or selection) down
- Ctrl-Click: Go to definition (also F3)
- Ctrl-D: Delete line
- Alt-/: Word completion (cycles through possible matches)
- Ctrl-Up: Scroll up
- Ctrl-Down: Scroll Down

What shortcuts do you rely on? Please share!
